ASSIGNMENT 2

*TEMPERATURE AND HUMIDITY SENSING AND ALARM AUTOMATION USING
PYTHON*

BY

Aarthi M L

CODE:

```
import random
```

```
while(True):
```

```
    a=random.randint(10,99)
```

```
    b=random.randint(10,99)
```

```
    if(a>35 and b>60):
```

```
        print("high temprature and humidity of:",a,b,"% alarm is on")
```

```
    elif(a<35 and b<60):
```

```
        print("Normal temprature and humidity of:",a,b,"% alarm is off")
```

```
    break
```

OUTPUT:

The screenshot shows a web-based Python IDE interface. At the top, there are buttons for 'Fork this' and 'Run', and a language dropdown set to 'Python 3'. The editor displays a file named 'main.py' with the following code:

```
1 import random
2 while(True):
3     a=random.randint(10,99)
4     b=random.randint(10,99)
5     if(a>35 and b>60):
6         print("high temprature and humidity of:",a,b,"% alarm is on")
7     elif(a<35 and b<60):
8         print("Normal temprature and humidity of:",a,b,"% alarm is off")
9     break
10
```

Below the editor is a console window. It shows the output of the program: 'Normal temprature and humidity of: 18 15 % alarm is off'. Below this, it states '...Program finished with exit code 0' and 'Press ENTER to exit console.' with a cursor. On the right side of the console, there is a Windows watermark that says 'Activate Windows' and 'Go to Settings to activate Windows.'
